From: J. M. Garman
Subject: Nicotine-in-Smoke Testing by Special Massachusetts Smoking
Procedure

The following questions need addressing so that we may plan for the requested special smoking study.

1. Is the eight ports analyzed for Production Audit sufficient for a reference FTC result on the sample population?
2. How many ports of smoking are needed via these new parameters?
3. How accurate does the Scotch Tape (ventilation cover) need to be cut, (\pm ? mm)?
4. What brands require testing? Minor brands? Generics?

I hope that we will be in a position to begin smoking by September 1 and complete testing by October 1.
